About

Self-taught developer who builds and ships real, working web applications end to end — front end, back end, data and hosting. I work fluently with modern tools, including AI-assisted development, and I'm comfortable picking up unfamiliar languages and APIs independently — the demos linked below are the proof. Early in my career and honest about that: no Computer Science degree and no commercial development experience to date. Alongside the technical work I have a solid background in customer service, administration and research, giving me strong communication, accuracy and reliability. I'm now looking for a developer role — junior, trainee, apprentice or contract — where I can build and keep growing.

Technical skills

JavaScript

TypeScript

HTML / CSS

React

Node.js

Express

SQL / SQLite

PostgreSQL

WebAssembly

Serverless (Cloudflare Workers)

REST / JSON APIs

JWT

Stripe

LLM API integration (Gemini)

Public APIs

MapLibre / Leaflet (mapping)

Unit testing

Input validation & edge cases

CSV import / export

Client-side / offline-capable apps

Asynchronous data loading

Print-ready output

Python

Git / GitHub

CI / CD

AI-assisted development

Selected projects — all live, try them from my portfolio

AI ATS Resume Matcher — full-stack + AI

A full-stack AI tool: score a CV against any job description, see the missing keywords, then generate a tailored cover letter and an improved CV to download. Built on a secure serverless backend (Cloudflare Worker) that holds the API key and calls Google's Gemini model — the browser never sees the key.

BOM Desk

Data administration console for manufacturing bills of materials. Holds material and labour lines, runs eight validation rules live, rejects invalid rows at import, exports CSV reports and logs every change. Built with invented demo data — not a deployment of any live system.

SQL Lab

A real SQLite engine compiled to WebAssembly and run client-side over a five-table relational schema. Schema browser, free-form query editor and eleven worked examples covering joins, aggregation,

subqueries, CTEs and window functions, with CSV export of any result set.

Test Bench

A TypeScript validation library (UK postcodes, sort codes, IBAN mod-97 checksums, strict date parsing, integer-pence money handling, CSV escaping) with a 28-case unit test suite. Library and suite both compile and execute in the browser; a deliberate-bug button demonstrates the suite catching a regression and naming the failing case.

Heat Anomaly Detector

Live heat-risk dashboard that compares today against the 30-year climate average (WMO 1991–2020) to flag real heat anomalies: real-time weather, a 3D terrain map, live radar and an auto-refresh watch mode. All key-free and client-side.

Beneish M-Score Screener

Runs the full eight-factor forensic-accounting model in the browser from two years of company figures to flag earnings-manipulation risk — no data leaves the device.

Thermal Compare

Compares live ‘feels-like’ conditions across multiple locations at once, ranked, with asynchronous per-location loading.

BundleBuilder

Creates the structure of a court bundle — a case title page, a numbered index, and a printable divider for each exhibit, in the order you set. Print them and slot your documents behind each divider. Everything runs in the browser; built for people representing themselves in court.

Employment history

Customer Service Advisor — Teleperformance (Sainsbury’s campaign), Newry · approx. 2–3 years

High-volume customer contact; diagnosing an issue from a non-technical description and resolving or escalating it accurately.

Inbound Telesales Advisor — HCL BPO (BT contract), Armagh · approx. 12 months

Explaining technical products and packages clearly to customers.

HGV Driver, Class C — Armatile Ltd, Armagh · 2006–2007

Recycling Operative — SCL Onyx, Bessbrook · 2003–2004

Production Operator — Heinz, Dundalk · 2000–2003

Trainee Accounts & Office Assistant — General City Accountancy Services, Newry · 1998–1999

Education

6 GCSEs incl. Maths & English	RSA 1
1995	1997
